

GisTool 圖層切割工具

批次將全台的 Shapefile 以 **Intersect** 方式切割成 縣市 Shapefile

輸入：全台 Shapefile

.shp 全台圖層 Shapefile

批次自動處理

輸出：縣市 Shapefile (逐一切割)

基隆市.shp

臺北市.shp

新北市.shp

桃園市.shp

臺中市.shp

臺南市.shp

高雄市.shp

花蓮縣.shp

...

批次高效處理
一次切割全台圖層

精準切割
以 Intersect 方式精準裁切

自動輸出
產出各縣市獨立 Shapefile

保留屬性
完整保留原始屬性資料

GisTool圖層切割工具

The screenshot shows the GisTool application window. It has a title bar with standard Windows window controls. The main interface is divided into several sections:

- 來源 Shapefile**: A section at the top with three buttons: "加入 Shapefile", "移除選取", and "清空清單". Below these buttons is a large empty rectangular area for a list of files.
- Intersect 圖層**: A section below the first one. It contains two radio buttons: "使用內定圖層: COUNTY_MOI_1090820.shp" (which is selected) and "使用自訂圖層 尚未選擇自訂圖層". To the right of the second radio button is a button labeled "選擇 Intersect 檔案". Below these is a label "輸出命名欄位 {polygon_name}" followed by three radio buttons: "COUNTYCODE", "COUNTYNAME", and "COUNTYENG" (which is selected).
- 執行狀態**: A section with a progress bar and the text "Ready".
- 訊息**: A section at the bottom with a text area containing the message: "GisTool 已啟動" and "內定 intersect 圖層: C:\Users\User\AppData\Local\Temp_MEI90562\data\COUNTY_MOI_1090820.shp".

At the bottom right of the window is a button labeled "Intersect".

- 本工具可以**批次**將**全台**的 Shapefile以Intersect方式切割成**縣市Shapefile**
- 來源檔案必須是一個**台灣**的 Shapefile
- 工具已內嵌**內政部**提供之**台灣縣市**Shapefile
- 使用者可以使用**自訂圖層**來做 Intersection
- 批次處理後各縣市Shapefile將以**{來源檔案名稱}_{縣市名稱}**命名，使用者可以**勾選**用來intersect的**圖層欄位**作為{縣市名稱}
